Brentuximab Antibody

Brentuximab Antibody are: Not Detected

Assay Methodologies and Limitations of Brentuximab

The Brentuximab antibody assay is an ELISA based assay and is only intended to report the presence or absence of antibodies against Brentuximab. This assay does not specifically identify neutralizing antibodies. Antibodies should not be present in normal human serum but may be present in patients on Brentuximab therapy.

This test was developed and its performance characteristics determined by Granger Genetics. The assay has not been cleared or approved by the FDA. The laboratory is regulated under CLIA as qualified to perform high-complexity testing. This test is used for clinical purposes. It should not be regarded as investigational or for research.
